INTERVIEW COPILOT · REDESIGN · STAGES 1–2

Research of the current interface and prompts for ImageGen

A full walkthrough of the app (34 screens and states), an analysis of structure, visual design and usability, requirements for the new design covering COPILOT-08 and COPILOT-09, and 20 detailed prompts for creating visual references in ChatGPT.

24 October 2026 · app version 0.6.0 (build 26) · branch feat/copilot-09-parakeet-parity
Screenshot source: the `--ui-snapshots` mode — real app windows on synthetic data (no microphone, keys or personal data). Screenshots: `docs/design/audit-2026-10-24/`.

1. How the research was done

Every window was rendered by the app itself in the service mode `--ui-snapshots`: real SwiftUI views, the synthetic profile from `profile.example/`, materials from `evals/materials/`, a fictional session. Audio, microphone and model requests were off; data lived in a temporary folder deleted after the capture.

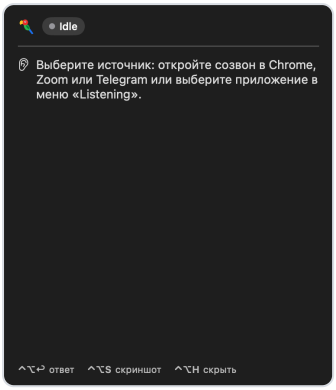

Surface	Captured	Count
Floating panel (overlay)	Idle, no permission, downloading models, listening, preparing, answer, answer with code (screenshot), bank card, "not in the bank", error, paused, self-check "my answer"	12
Settings	Keys, Models, Audio, Bank, Privacy, Panel, Hotkeys, Budget	8
"Profile" window	Résumé, Facts about you, Job, Instructions, Materials, Questions, question editor	7
Session history	List and session details	1
First launch	Permissions, key, models; permissions window	4
Browser pages	AI interview, test call	2

Not captured automatically: the menu-bar dropdown (NSMenu is not drawn off screen — its content below comes from `MenuLayout`), the panel background blur (the HUD material renders only over a real desktop — snapshots show a dark background), macOS system dialogs. This is a limitation of the capture method, not of the app.

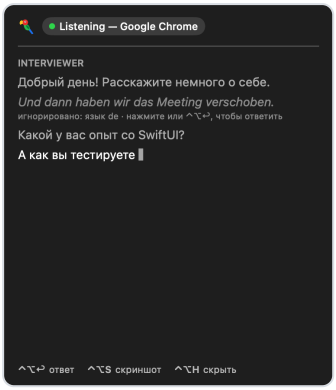

Menu-bar menu (content from MenuLayout)

Section	Items
Listening	"Listening — <app>" (source submenu: Auto, running apps, all system audio, microphone) · Pause/Resume ^⌥P
Mode	Mode (Question bank only / Bank + hint / Generate every answer) · Models (chain, strong model) · Language (Auto/UK/RU/EN)
Profile	Profile (profile list, "No profile", "Profiles…") · Question bank (N cards)… · "Profile: résumé, instructions…" · Test call… · AI interview…
Actions	Answer now ^⌥↩ · "I'm answering now" ^⌥A (self-check) · Screenshot → Claude ^⌥S · Show/Hide panel ^⌥H · New interview · Session history…
Status	"Today: $0.00 · Gemini: N req"
App	Settings… ⌘, · Quit ⌘Q

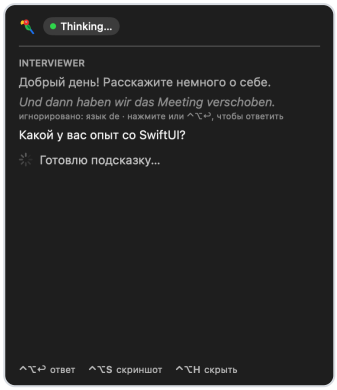

2. Floating panel — the main screen during a call

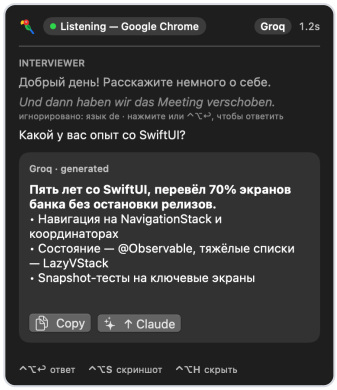

Idle — no source selected

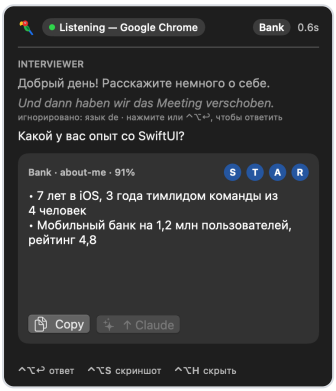

Listening: lines, a gray filtered one, a partial one

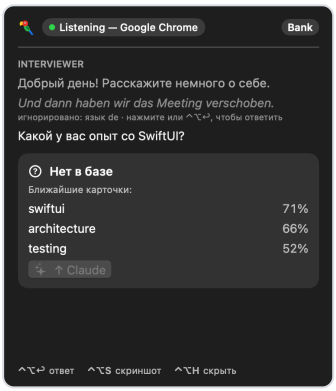

Preparing a hint

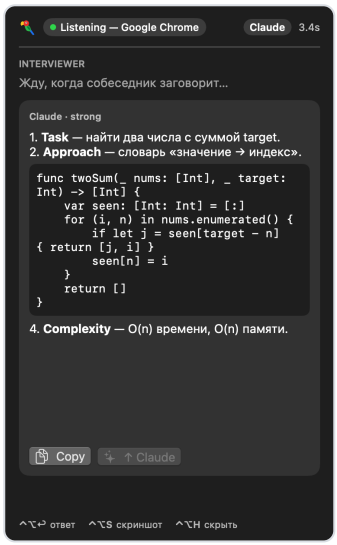

Model answer

Bank card (STAR)

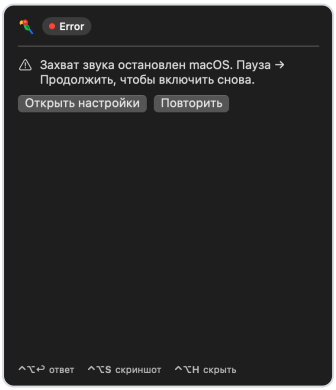

"Not in the bank" + closest

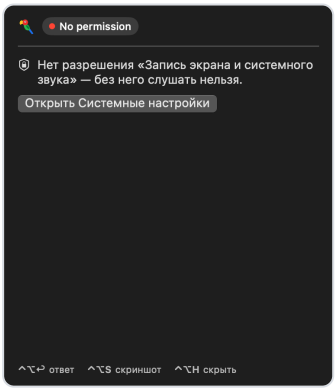

Task screenshot → code

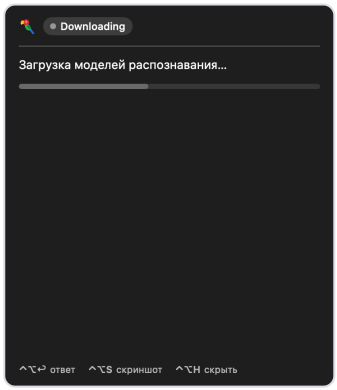

Self-check: "my answer"

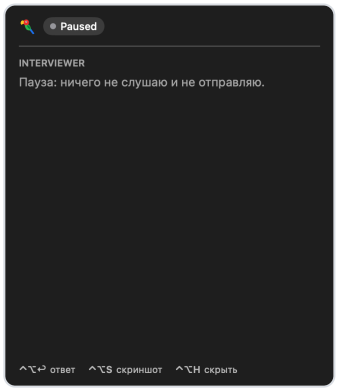

Capture error

No permission

Downloading models

Paused

Structure

A vertical dark HUD panel 380×420: header (parrot, status capsule, model, latency) → "INTERVIEWER" with the last three lines → answer card (source, Markdown, Copy, ↑ Claude) → footer with hotkey hints.

What works

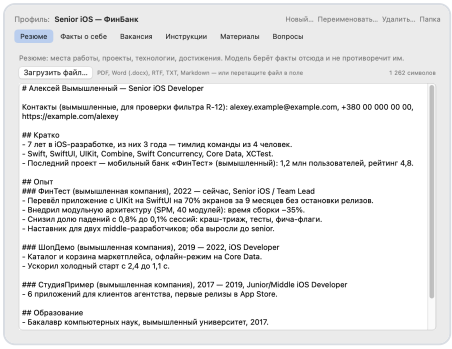

> The answer is readable: a bold first line, short bullets, a large font; gray filtered lines are clickable.

> It does not take focus from the call (non-activating panel), shows on all desktops, size and position are remembered.

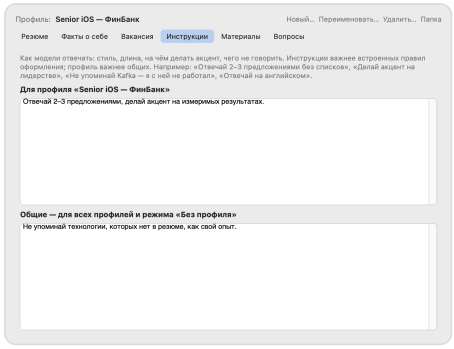

Problems

- No action bar: Answer, Screenshot, Chat are available only via hotkeys; the hotkey hints in the footer are small and far from the content.
- No "Question: …" header above the answer — it is unclear what exactly is being answered (especially after the question changes).
- No answer history: a new answer erases the previous one; you cannot go back to an answer from 2 minutes ago.
- Question-detection states are invisible: "checking / question detected / not a question" happen silently.
- While an answer is being prepared the previous one disappears entirely — an empty space instead of a dimmed "previous".
- Lots of empty space: with 3 transcript lines and a short answer half of the panel is empty; the height does not adapt.
- The self-check footer wraps words mid-word — 4 hints do not fit into 380 pt.
- Mixed languages: "Listening", "Thinking…", "Copy", "INTERVIEWER" next to Russian text.
- A screenshot answer shows "Waiting for the other person to speak…" — the transcript state is unrelated to the task.
- No session timer, no End button, no microphone and call-audio indicators — it is unclear whether the app hears the call.

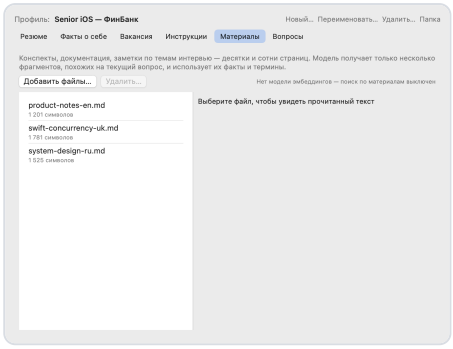

3. "Profile" window

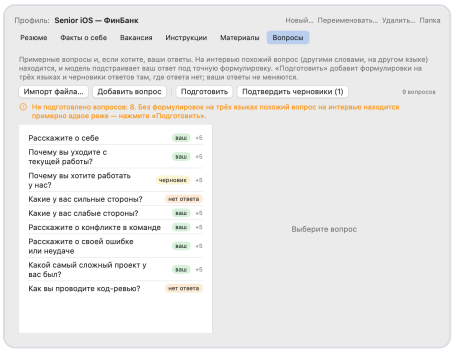

Résumé

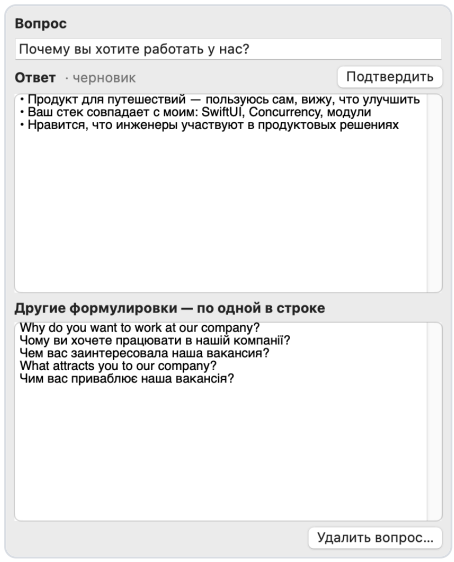

Instructions (profile and general)

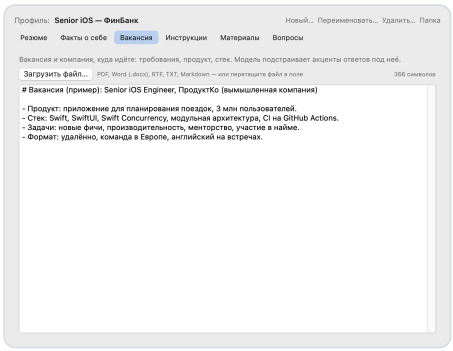

Materials

Questions

Question editor

Job

Structure

Header (profile picker, New / Rename / Delete / Folder) → six tabs → each with an explanation, an upload button, a text editor or a list with details.

Problems

> The résumé is shown as raw Markdown in a monospaced editor ("## Опыт", "- …"); no document preview.

> Long gray explanations above every tab take the first screen and repeat each other.

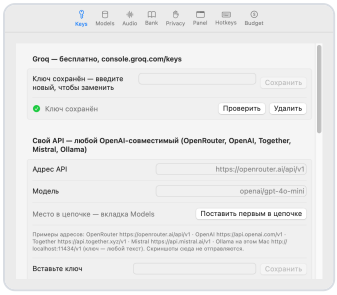

> Questions: the right side is empty on open ("Select a question"); statuses are colored capsules without a legend; "+5" is unclear without a tooltip.

> Materials: no per-file state (read / indexing / ready / error) — only one status line on the right.

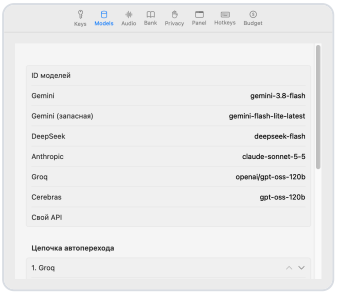

> Profile, questions, materials, history and settings are five separate windows; there is no single "main window".

> It is not visible what from the profile actually goes into a request (characters only in the footer) or how the profile relates to a session.

4. Settings

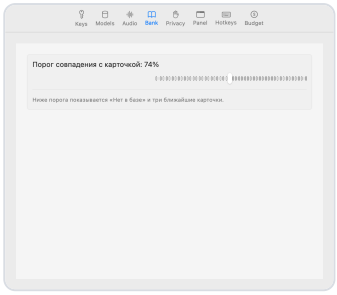

Keys

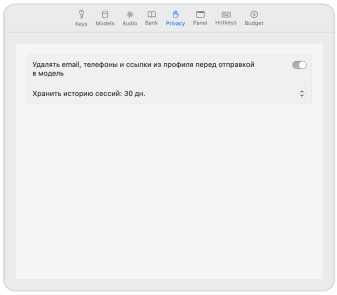

Models

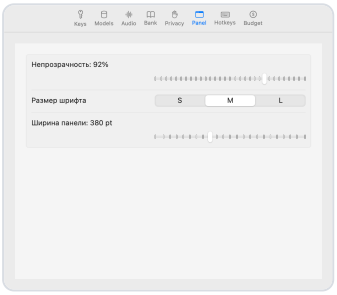

Audio (very long)

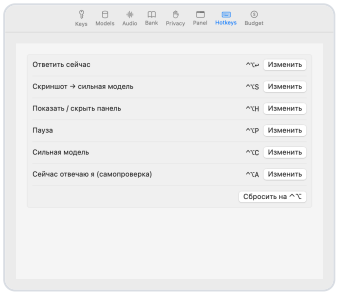

Bank

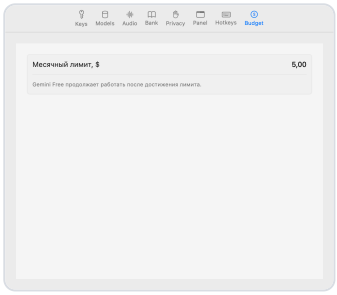

Privacy

Panel

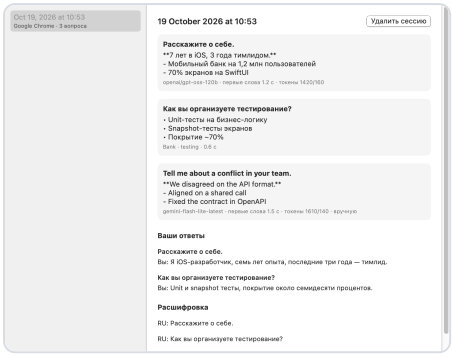

Hotkeys

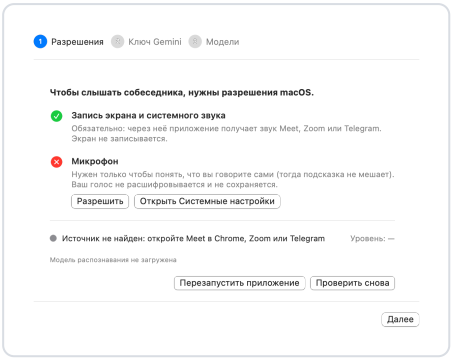

Budget

- Eight tabs with English names; Audio is about 2 screens of technical toggles (Whisper turbo, Silero, LocalVQE, thresholds in ms).
- No "basic / advanced" split: pause thresholds, the bank threshold and model IDs sit next to the main choices.
- Keys: a long list of identical provider cards; it is unclear which key is the minimum (now — Groq).
- Bank and Panel hold one or two settings per tab; "Bank" is an outdated name (now profile questions).
- Strengths: everything is configurable without files; key checks, hotkey remapping and a budget exist.

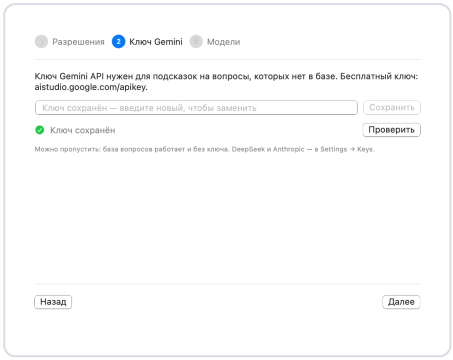

5. History, first launch, browser pages

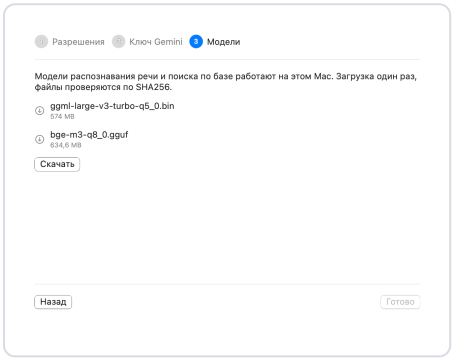

Session history

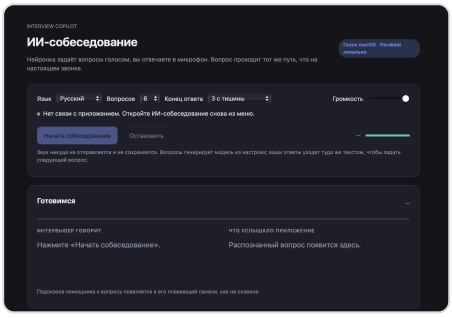

First launch: permissions

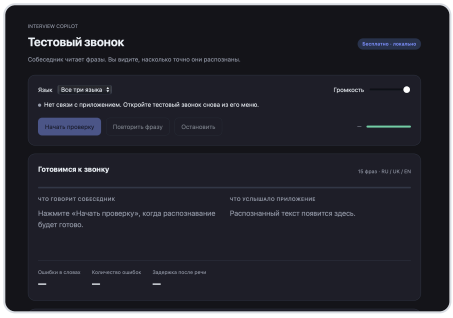

First launch: "Gemini key"

First launch: models

AI interview (browser)

Test call (browser)

> History: answers are shown as raw Markdown ("**…**", "- …"); the date is in English ("Oct 19, 2026"); no review, comments, search or "interviewer / you" split.

> First launch is outdated: a "Gemini key" step although free Groq is first in the chain; the microphone permission text "your voice is not transcribed" is wrong since COPILOT-05.

> Three visual languages: a dark HUD (panel), light system windows, dark web pages with their own style (AI interview, test call).

> No main window or "home" screen: the user starts from the menu bar and cannot see whether everything is ready for a call.

6. Summary analysis and requirements for the new design

Structure

- The app is a set of scattered windows around the menu bar. A hierarchy is needed: a **main window** (preparation, history, profiles, settings) + a **live overlay** (the call only) + the **menu bar** (quick access).
- There is no "session" object: preparation, the call and the review are not connected. COPILOT-09 introduces a wizard, Start/End and a review — the design is built around the lifecycle *Preparation → Check → Call → Review*.

Visual design

- One language: dark "glass" for the overlay, native macOS windows with the same accent palette and typography for the main window; browser pages in the same palette.
- One accent (indigo/blue), semantic state colors (green — listening, amber — checking/draft, red — error/End), SF Pro, a 4/8 pt grid, corner radii 10–16 pt.
- The whole interface in Russian; only model names and keys in English.

Usability

- Main actions as visible buttons with hotkey hints (as in ParakeetAI), not only as hotkeys.
- Explicit, separate states: audio source, recognition, question, generation, error.
- Reading while speaking: a question header, a large first answer line, ←/→ history, no scroll jumps.
- Settings: basic separate from advanced; the minimum to start (one free key) is obvious.

New features the design has to accommodate

From task	Features
COPILOT-08 (done)	Profiles per job search; résumé, facts, job, instructions (profile + general); materials with chunk search; questions: import, table, statuses, "Prepare", drafts
COPILOT-09 stage 1	"New session" wizard (Interview / Regular / Mock, profile, company, job from a link, language, model, answer settings, Auto Generate, saving, review, planned duration); pre-start check; Start/End, timer; "Start a session?" when a call starts
stage 2	Overlay: Answer ⌘↩ / Screenshot ⌘⇧↩ / Chat ⌘⇧Space bar, timer, End; transcript strip + Clear; status Checking / Question detected / No question; "Question: …" card, ←/→ history, previous dimmed; Chat (question, refinement, "Shorter / More detail / Example", session instruction); menu: Auto Generate, language, zoom, other screen, Private + check
stage 3	Answer settings: format, length, tone with a live preview
stage 4	Review: summary, an AI comment on each answer, transcript by speaker, "Ask AI"
stage 5	Screenshot task: thumbnails, "add screenshot", active task in context

7. How to use the prompts in ChatGPT

1. First **P00 — the style guide**. Save the result: it is the reference image.
2. For every following prompt attach the P00 image and write before the prompt: "*Use the attached style guide exactly (colors, typography, radii, glass material)*". That keeps all screens in one style.
3. The size is given in each prompt (usually 1536×1024; overlay — 1024×1536). If the Cyrillic text is garbled, ask to "re-render with crisp, correctly spelled Russian UI text" or generate an English version.
4. Make 2–3 variants per screen and pick the best. File names: `P07-overlay-answer.png` etc.
5. Send the images here — the final redesign after COPILOT-09 is based on them.

Common style block (already embedded in every prompt below): macOS 15 Sequoia native app, Apple Human Interface Guidelines, SF Pro typography, 8-pt grid, corner radius 12–16 px, subtle 1-px hairlines, accent color indigo #4C6EF5, semantic colors: green #2FB344 (listening), amber #F59F00 (checking / draft), red #E03131 (error / end), neutral graphite. Live overlay: dark translucent glass (#16181D at 82% with background blur), white text. Main windows: light, clean, generous whitespace, sidebar navigation. UI language Russian. High-fidelity product mockup, pixel-perfect, no device frame, no watermark, no lorem ipsum, realistic content about an iOS developer interview.

8. ImageGen prompts — live overlay

P00 · Style guide (reference image)

1536×1024

```
Design system sheet for a macOS app called "Interview Copilot" (a real-time interview assistant that listens to a call and shows suggested answers). macOS 15 Sequoia, Apple HIG, SF Pro typography, 8-pt grid. Show on one canvas: color palette swatches (indigo accent #4C6EF5, green #2FB344 "Слушаю", amber #F59F00 "Проверяю / Черновик", red #E03131 "Ошибка / Завершить", graphite neutrals); type scale (Title 22, Headline 15 semibold, Body 14, Caption 11) with Russian sample text; buttons (primary indigo, secondary bordered, destructive red, keycap hint chips like "⌘↩", "⌘⇧↩"); status pills with colored dots; a dark translucent glass card (#16181D 82% + blur, white text) next to a light window card; toggles, segmented control, text field, progress bar, list row with status capsule; icons in SF Symbols style. Clean, calm, premium, generous whitespace. Russian labels, crisp correctly spelled Cyrillic, no lorem ipsum, no watermark.
```

P01 · Overlay: listening, question detected, answer appearing

1024×1536

```
macOS floating overlay window (dark translucent glass, #16181D 82%, background blur of a Google Meet call visible behind), width ~460 px, rounded 16 px, floating at the top-right of the screen. Layout top to bottom: (1) Action toolbar: two tiny live indicators (microphone with green level bars, call audio with green level bars), buttons "Ответ ⌘↩", "Скриншот ⌘⇧↩", "Чат ⌘⇧Space" as dark pill buttons with keycap hints, then icons move ✥ and collapse, a timer "12:47", a "⋮" menu and a red "Завершить" button. (2) Transcript strip: one line "Расскажите, как вы организовали тестирование в последнем проекте?" with a small "Interviewer" label, a "Очистить ⌘⇧⌫" chip and an expand icon. (3) Status chip "● Вопрос найден" in green. (4) Answer card: header "Вопрос: Тестирование в последнем проекте", nav arrows "‹ 3 / 7 ›", copy icon; body: first line bold and large "Строили пирамиду тестов: 70% unit, snapshot на ключевые экраны, e2e на оплату."; three short bullets; the last bullet is still streaming with a blinking caret. Footer of the card: "Groq · 1,1 с" and quick action chips "Короче", "Подробнее", "Пример". Russian UI, white text, high contrast, pixel-perfect product mockup.
```

P02 · Overlay: states (a strip of 6 mini overlays)

1536×1024

```
One canvas showing six small versions of the same dark-glass macOS overlay (from P01) side by side, each labeled below: (1) "Проверяю…" — transcript line visible, amber spinner chip "Проверяю…"; (2) "Вопрос найден" — green chip; (3) "Не вопрос" — grey chip "Не вопрос · ответить вручную ⌘↩"; (4) "Готовлю ответ…" — new header "Вопрос: Почему вы уходите?" with a thin indigo progress line, the previous answer below is dimmed to 40% with a small label "предыдущий ответ"; (5) "Нет сигнала звонка 8 с" — call-audio indicator red, banner "Не слышу звонок · проверьте вкладку Meet" with button "Выбрать источник"; (6) "Ошибка" — red banner "Модели недоступны: лимит запросов" with buttons "Повторить" and "Сменить модель". Consistent spacing, Russian text, crisp typography.
```

P03 · Overlay: chat and answer refinement

1024×1536

```
The dark-glass macOS overlay from P01 with the chat field open at the bottom: a rounded input "Спросите или уточните ответ…" with a send arrow and hint "↩ отправить · Esc закрыть". Above it, the answer card shows version tabs "Версия 1 · Версия 2 (короче)". A small indigo session-instruction badge under the toolbar: "На всю сессию: отвечать по-английски ×". Quick chips above the input: "Короче", "Подробнее", "Пример кода", "Без жаргона". Russian UI, white text, pixel-perfect.
```

P04 · Overlay: ⋮ menu and visibility check

1024×1536

```
The dark-glass overlay with its "⋮" menu open as a dark popover: rows "Автоответ" (toggle on), "Язык звонка: Українська ▾", "Масштаб — 100% + ↺", "На другой экран →", "Скрывать при демонстрации экрана" (toggle) with a secondary button "Проверить видимость", a result line "Проверено 24.10, macOS 15.7: в захвате экрана не видно ✓", divider, "Завершить сессию" in red. Rows have SF Symbol icons and keyboard hints. Russian UI, crisp text, premium macOS feel.
```

P05 · Overlay: screenshot task with code

1024×1536

```
The dark-glass overlay answering a coding task captured by screenshot. Under the toolbar: an "Активная задача" bar with two small screenshot thumbnails (+ "Добавить снимок ⌘⇧↩") and a title "Two Sum — найти пару с суммой target". Answer card sections with small headers: "Задача", "Подход" (2 bullets), "Код" — a syntax-highlighted Swift code block in a darker inset with a "Копировать код" button, "Сложность: O(n) по времени, O(n) по памяти", "Проверки" (3 test cases). The transcript strip shows "А какая сложность по памяти?" with chip "уточнение к задаче". Russian UI, monospaced code, pixel-perfect.
```

P06 · Collapsed overlay and menu bar

1536×1024

```
Left half: the overlay collapsed into a single compact dark-glass toolbar bar (indicators, "Ответ ⌘↩", "Скриншот", "Чат", timer "08:15", expand icon, red "Завершить"), floating over a Zoom call. Right half: the macOS menu bar dropdown of the app (parrot icon in menu bar), light vibrancy menu: header row "● Сессия идёт · Senior iOS — ФинБанк · 08:15", items "Показать оверлей ^⌥H", "Ответить сейчас ⌘↩", "Сделать скриншот ⌘⇧↩", "Завершить сессию", divider, "Создать сессию… ^⌥N", "Профили…", "История сессий…", divider, "Сегодня: 42 запроса · $0,00", "Настройки… ⌘,", "Выйти ⌘Q". Russian text, native macOS menu styling.
```

9. ImageGen prompts — session

P07 · "New session" wizard — step 1 "Details"

1536×1024

```
macOS sheet/modal window "Создать сессию", light theme, two-column layout. Left narrow column: title "Создать сессию", subtitle "Детали и настройки звонка", vertical stepper "1 Детали" (active, indigo), "2 Настройки", "3 Проверка", and at the bottom secondary buttons "Пробный звонок" and "Как это работает". Right column: segmented control "Собеседование | Обычный звонок | ИИ-собеседование" (first selected); field "Профиль" dropdown "Senior iOS — ФинБанк" with small chips "резюме ✓ · 3 материала · 24 вопроса"; button with sparkle icon "Вставить ссылку на вакансию"; fields "Компания" ("ФинБанк"), "Описание вакансии" (multiline, filled with a short realistic description); bottom right buttons "Отмена" and primary indigo "Далее". Clean, spacious, Russian UI, pixel-perfect.
```

P08 · Wizard — step 2 "Settings"

1536×1024

```
Same "Создать сессию" window, step 2 active. Right column grouped list with icons: "Язык звонка" → dropdown "Авто (UK / RU / EN)"; "Модель" → dropdown "Groq · gpt-oss-120b (бесплатно)"; "Стиль ответа" → "Сценарий + пункты · Сбалансированный · Нейтральный" with button "Настроить"; "Указания на сессию" → button "+ Добавить"; section "Дополнительно": toggles "Автоответ на вопросы (рекомендуется)", "Сохранять расшифровку", "Разбор после завершения"; "План длительности" stepper "60 мин". Caption under toggles in small grey: "Расшифровка хранится только на этом Mac 30 дней". Buttons "Назад" and primary "Далее: проверка". Russian UI, light theme.
```

P09 · Wizard — step 3 "Pre-start check"

1536×1024

```
Same window, step 3 "Проверка". A checklist with live results: "Микрофон — MacBook Pro" green check and a small live level meter; "Звук звонка — Google Chrome (Meet)" amber warning "нет сигнала 5 с · включите звук вкладки" with button "Выбрать источник"; "Распознавание — Parakeet v3, локально" green; "Модели — Groq, Gemini" green with "ключи проверены"; "Скриншоты — разрешение есть" green; "Профиль — резюме, 3 материала, 24 вопроса (подготовлено 20)" green. Big primary indigo button "Начать сессию" and secondary "Начать всё равно". Russian UI, clean light theme, pixel-perfect.
```

P10 · "Start a session?" notification

1536×1024

```
macOS desktop with a Zoom meeting window, and a native macOS notification banner in the top-right corner from "Interview Copilot" (parrot app icon): title "Звонок в Zoom", text "Начать сессию с профилем «Senior iOS — ФинБанк»?", action buttons "Начать" and "Настроить…". Realistic macOS Sequoia look, Russian text.
```

P11 · Answer settings with a live preview

1536×1024

```
macOS modal "Стиль ответа", light theme, two panes. Left: three rows with icons and chevrons — "Формат: Сценарий + пункты", "Длина: Сбалансированный", "Тон: Нейтральный"; one row is expanded showing a segmented control "Короткий | Сбалансированный | Подробный". Bottom buttons "По умолчанию" and primary "Сохранить для сессии". Right pane: dropdown "Тип вопроса: Поведенческий"; label "Предпросмотр · по вашему профилю"; a preview card with "Вопрос: Расскажите о конфликте в команде" and an answer — bold first line, 3 bullets — rendered like the overlay answer; a tiny "обновлено 1,2 с назад" caption. Russian UI, crisp text.
```

10. ImageGen prompts — main window, profile, review

P12 · Main window: "Today" (new home screen)

1536×1024

```
macOS main window "Interview Copilot", light theme, left sidebar with sections: "Сегодня" (selected), "Сессии", "Профили", "ИИ-собеседование", "Настройки", and at the bottom a status "● Готов к звонку". Main area: large greeting card "Готов к собеседованию" with primary indigo button "Создать сессию ^⌥N" and secondary "Пробный звонок"; a readiness row of four small cards ("Микрофон ✓", "Распознавание ✓ Parakeet", "Модели ✓ Groq", "Профиль ✓ Senior iOS — ФинБанк"); "Последние сессии" list with 3 rows (date, company, type chip "Собеседование", duration, score dot); a card "Подготовка" with progress "Вопросы подготовлены 20 / 24" and button "Подготовить". Calm, premium, spacious, Russian UI, pixel-perfect.
```

P13 · Main window: Profile — résumé

1536×1024

```
Same main window, sidebar "Профили" selected with a secondary list of profiles ("Senior iOS — ФинБанк" selected, "Backend — стартап", "+ Новый профиль"). Content header: profile name, chips "резюме ✓", "3 материала", "24 вопроса", buttons "Переименовать", "⋯". Horizontal tabs: "Резюме" (selected), "Факты о себе", "Вакансия", "Инструкции", "Материалы", "Вопросы". Resume tab: a drop zone card "Перетащите PDF, Word или текст · или Загрузить файл ⌘O" collapsed to a slim bar with "cv-2026.pdf · прочитано 3 862 символа · заменить"; below, a two-pane view: left editable text, right a formatted preview of the resume (name, headings "Опыт", "Навыки", bullets). Footer hint: "В каждый запрос: 4 120 символов". Russian, light theme.
```

P14 · Profile — materials and questions

1536×1024

```
Same main window, profile "Вопросы" tab. Toolbar: "Импорт файла ⌘I", "Добавить вопрос", primary "Подготовить (4)" and a progress capsule "Готовлю формулировки… 2 из 4". Left: table of questions with columns "Вопрос", "Ответ", "Формулировки", status capsules with legend ("ваш" green, "черновик" amber, "подтверждён" indigo, "нет ответа" grey). Right: detail editor for the selected question — question field, answer editor with status "черновик" and button "Подтвердить", list of phrasings grouped by language flags UK / RU / EN. A small inset in the corner shows the "Материалы" tab state: three files with per-file states "готов ✓", "индексирую 60%", "скан — нет текста ⚠". Russian UI, light theme.
```

P15 · Session review — "Summary"

1536×1024

```
macOS window "Сессия · ФинБанк · 24 октября, 14:00 · 48 мин", light theme. Tabs: "Сводка" (selected), "Расшифровка", "Спросить ИИ". Top: summary card "Общее впечатление" with 3 strengths and 2 improvements, "Следующие шаги" (e.g. "Тех. интервью в четверг"). Below: list of question cards — each shows question title, "Вы ответили:" quote in regular text, "Подсказка на экране" collapsed chip, and an AI comment block with a small sparkle icon: "Хорошо: конкретные цифры. Не хватило: результата для бизнеса. Лучше сказать: …". A small progress line at the top "Разбор готов". Russian, pixel-perfect.
```

P16 · Review — transcript and "Ask AI"

1536×1024

```
Same session window split view. Left: tab "Расшифровка" — chat-like transcript with speaker labels and timestamps: "Интервьюер 14:02" (grey bubble), "Вы 14:02" (indigo-tinted bubble), and between them a dashed small card "Подсказка показана" (collapsed). Right: tab "Спросить ИИ" — a chat pane with suggested prompts chips ("Какие вопросы были про архитектуру?", "Напиши письмо-благодарность", "Что подтянуть к следующему этапу?") and one answered message. Russian UI, light theme, clean.
```

P17 · Settings (new)

1536×1024

```
macOS Settings window in System Settings style: left sidebar with icons "Основное", "Модели и ключи", "Звук и распознавание", "Ваш голос", "Ответы", "Горячие клавиши", "Приватность", "Бюджет". Selected "Модели и ключи": a top card "Для старта достаточно одного бесплатного ключа Groq" with status "Groq ✓ проверен"; a reorderable list "Порядок моделей" with drag handles (Groq, Cerebras, Gemini, DeepSeek, Claude, Свой API) each with status dot and "бесплатно"/"платно" tag; collapsed section "Дополнительно" (ID моделей, параллельный запрос, таймаут). Russian UI, light theme, pixel-perfect.
```

P18 · First launch

1536×1024

```
macOS onboarding window, light theme, 4 steps shown as a horizontal progress at the top: "Разрешения ✓", "Бесплатный ключ" (active), "Модели", "Профиль". Active step content: big title "Подключите бесплатную модель", text "Groq отвечает за ~1 с и бесплатен", a secure field "Ключ Groq" with button "Проверить", link "Получить ключ на console.groq.com", a secondary option "Добавить другие модели позже". Illustration: small parrot mascot icon. Buttons "Назад" and primary "Далее". Russian, friendly, clean.
```

P19 · AI interview (in the app style)

1536×1024

```
Main window section "ИИ-собеседование", light theme matching the app: left — setup card (language "Русский", "Вопросов: 6", "Профиль: Senior iOS — ФинБанк", "Длительность 30 мин", primary "Начать собеседование"); right — live area with a large round speaking indicator for the AI interviewer (indigo waveform), the current question in big text "Как вы бы спроектировали офлайн-режим?", below "Вы отвечаете…" with a green microphone level and the live transcript of the candidate; a timeline of 6 question dots (2 done). Russian UI, calm and focused.
```

11. Next sequence

Step	Who	Result
1. Research and screenshots	done	this document, 34 PNGs in `docs/design/audit-2026-10-24/`
2. ImageGen prompts	done	20 prompts (P00–P19), also in `docs/design/redesign/prompts.md`
3. Visual references	owner in ChatGPT	images P00–P19 → send to the chat
4. Architectural update	executor	COPILOT-09 stages 1–5 (sessions, overlay, answer style, review, screenshots) — features without the final visuals
5. Full redesign	executor	only after step 4: main window, overlay, wizard, review, settings, first launch, browser pages — following the references

Order as requested by the owner: the redesign does not start until the architectural update (COPILOT-09) is complete. Steps 3 and 4 can run in parallel: the owner generates references while the executor builds the features.

Defects found in the current interface — to fix during the architectural stage (they do not wait for the redesign)

- First launch: the "Gemini key" step → "Free key (Groq)".
- Permissions window: "your voice is not transcribed" is wrong since COPILOT-05; replace with an accurate description.
- History: answers are raw Markdown; the date is in English.
- The panel footer in self-check mode wraps words.
